Abstract

Artificial intelligence (AI) and ChatGPT-4 have versatile applications in both school children's education and university settings. Chat GPT-4 can be a valuable assistant for teachers in various ways. The model can utilize its comprehensive knowledge to provide additional information and concepts in diverse fields to help explain difficult topics. It can also provide extra exercises and questions to assist students in practicing and reinforcing their skills. With its predictive and linguistic generation capabilities, Chat GPT-4 can also offer review and editing for students' essays and research papers, aiming to improve the quality of their writing and expression. It can also guide students in the research process and the collection of reliable sources. Furthermore, the model can provide individual support by answering students' questions and guiding them through the learning process. It can also be used to create simulations and educational scenarios to enhance students' understanding and application of theoretical concepts in realistic contexts. It is worth mentioning that the model relies on the inputs it receives, so the teacher needs to play an active role in guiding and clarifying the ideas and information provided by the model, as well as in evaluating and monitoring students' progress.

Keywords

Chat Gpt-4, Artificial intelligence, School education, Universities.

Generative AI and ChatGPT-4 have versatile applications in both school children's education and university settings. These technologies enable personalized learning experiences by adapting to individual students' needs, providing tailored explanations, resources, and practice exercises aligned with their learning styles and abilities. Additionally, ChatGPT-4 can function as a virtual tutor, offering immediate assistance, answering questions, and guiding students through various subjects. Generative AI supports language and writing skills by offering grammar and spelling suggestions, feedback on sentence structure and coherence, and generating ideas for essays and research papers. In research and information gathering, generative AI models assist students by granting access to reliable sources,

summarizing articles, extracting key information, and even generating bibliographies, enhancing research quality and efficiency. Furthermore, generative AI can create immersive simulations and virtual reality scenarios, enabling students to engage with complex concepts in subjects like science, engineering, and history. It is important to emphasize that while these tools are valuable, they should be complemented with human guidance and supervision, as teachers and educators play a critical role in guiding the learning process, ensuring accuracy, and fostering critical thinking skills. Modern technology and artificial intelligence have provided new and innovative possibilities in the field of education. One such technology is Chat GPT-4, an advanced language-based artificial intelligence model. In this editorial, we will

discuss how Chat GPT-4 can serve as a valuable assistant for teachers in an educational setting [1]-[4].

Chat GPT-4 possesses the ability to provide additional information and explain complex concepts to students. Teachers can use this model to clarify concepts and provide clear and diverse examples for the subjects being taught [5]. With its understanding and question-answering capabilities, Chat GPT-4 can offer personalized explanations tailored to each student's needs [1] [6]-[8].

In addition, Chat GPT-4 can provide extra exercises and questions to help students practice and reinforce their skills. Teachers can use this model to create diverse exercises that target various levels and abilities. These exercises can be customized to suit each student's needs, effectively aiding them in skill development. Chat GPT-4 can also serve as a powerful tool for reviewing and editing students' writings. Teachers can use this model to evaluate research papers and essays, providing valuable feedback and suggestions to improve the quality of students' writing and expression. Additionally, Chat GPT-4 can assist in guiding students through the research process, ensuring they gather reliable sources and use them appropriately [1][4][9]-[12].

Through its predictive and linguistic generation capabilities, Chat GPT-4 can also offer individual support to students. Students can ask questions and seek immediate and comprehensive answers from Chat GPT-4. This individual support can help students understand difficult concepts and overcome learning hurdles.

Chat GPT-4 can be used to create simulations and educational scenarios. Teachers can utilize this model to develop realistic learning environments that allow students to apply theoretical concepts in practical contexts. This enhances student engagement and helps them understand how knowledge is applied in everyday life.

Conclusion, by harnessing Chat GPT-4 as an assistant, teachers can enhance the learning experience, and improve understanding and interaction among students. This model provides additional resources, personalized support, and diverse exercises, and can be used to offer specialized guidance and reviews. However, teachers need to play an active role in guiding the educational process and assessing students' progress to ensure proper understanding and achieve desired outcomes.

Pros, Chat GPT-4 offers several benefits as an assistant for teachers. Firstly, it provides round-the-clock availability, allowing teachers to access support and information at any time. Secondly, it offers instant responses, saving teachers time and enhancing their productivity. Thirdly, Chat GPT-4 functions as a vast knowledge repository, storing and retrieving information on various topics, aiding teachers in lesson preparation and research. Moreover, it provides personalized assistance by adapting to individual teachers' needs, offering tailored recommendations, resources, and guidance based on their preferences and teaching style. Lastly, Chat GPT-4 supports multiple languages, enabling teachers from diverse backgrounds to access assistance and resources in their preferred language.

However, there are certain disadvantages to using Chat GPT-4 as an assistant for teachers. Firstly, it lacks the ability to provide the nuanced and empathetic human interaction

that teachers may require in certain situations, such as dealing with sensitive student issues or offering emotional support. Secondly, the AI assistant may struggle to understand complex or ambiguous queries, resulting in inaccurate or irrelevant responses that may not address the specific needs of the teachers. Thirdly, relying heavily on Chat GPT-4 may lead to a reduced emphasis on critical thinking and problem-solving skills among teachers, as they may become overly reliant on the AI assistant for solutions. Additionally, the use of AI assistants raises ethical concerns regarding data privacy, security, and the potential for misuse or bias in the information provided. Lastly, Chat GPT-4 may encounter technical limitations, including occasional system failures, limited access to the internet or specific resources, and potential biases embedded in its training data.

ACKNOWLEDGMENTS

We would like to thank the University of Basrah, Southern Technical University, Federal University Dutse, Lahore Garrison University, Universitas Al Asyariah Mandar and Universiti Sains Malaysia, incredibly if their assistance and cooperation. Their support and cooperation played a great role in the development and completion of this research.

CONFLICT OF INTEREST

The authors declare that they have no conflicts of interest to report regarding the present study.
